Cross Agricultural Engineering – “It’s the Obvious Choice”

Cross Power Washer Trailer

All Cross Agricultural Engineering machines are built to the highest standards by a team of dedicated engineers using quality materials and manufactured in the latest high-tech manufacturing facilities. This makes the Cross Power Washer Trailer the obvious choice on the market today.

The Cross Power Washer Trailer is manufactured using high-quality, heavy-duty steel, which is galvanized to stand up to the tough Irish conditions. With its 1100 litre plastic water tank and diesel-powered pump, the self-contained Cross Power Washer Trailer can work continuously for hours before being refilled. The unit is easy to tow, fully road legal, and only weighs 1500kg when full. This any jeep or even some cars will have no trouble towing this unit. If the towing vehicle is less than 1500kg then this machine can be towed without a trailer licence.

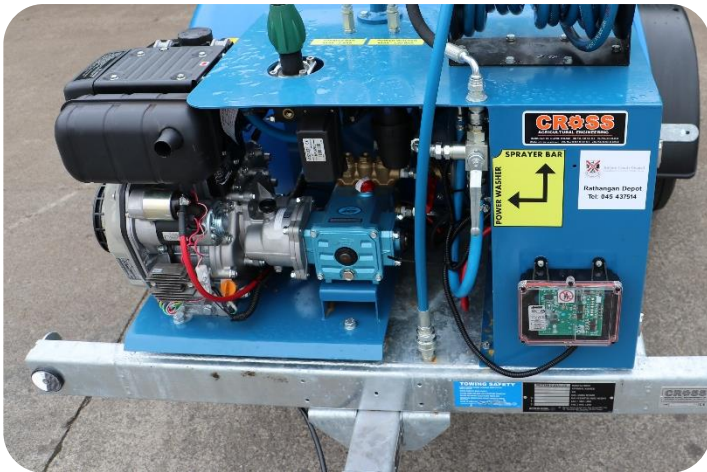

The CAT pump has a maximum pressure of 245 bar, which is more than enough for any power washer applications. The Cross Power Washer Trailer can make light work of even the toughest jobs. The unit is also fitted with a soap wash option to give an extra clean finish. The Yanmar single cylinder diesel engine is easy to start, and is a low noise unit, making it the obvious choice for driving the pump. The heavy duty 20m hose reel gives the unit ample range to cover a large area. The tensioning device stops free spooling of the reel, helping to keep the hose tidy and prevent kinking when dragging it across the yard.

The Cross Power Washer Trailer is the obvious choice for any farm or construction site where mobile power washing work is required. The heavy duty, galvanised frame is designed with the harsh Irish and UK conditions in mind. The engine, pump and reel are covered to keep the worst of the conditions out, preserving their lifespan. The plastic water tank is light, making the unit easier to tow.

Easy to Use

The Cross Power Washer Trailer is fitted with a folding spray bar which is ideal for road washing or spill cleanup. As health and safety and environmental requirements of farms and sites increase, the need for this sort of cleaning apparatus also increases. Easily switch between the spray bar and hand lance with the front lever valve. The lever valve either side of the spray bar allows it to be operated with the arms folded up for a narrower spread.

Dual Washing

The Cross Power Washer Trailer can be used as a mobile power washing unit, or as a road washer/ clean up unit. The powerful engine and pump give plenty cleaning power for any application. The soap wash can help to cut through even the most stubborn dirt. This, along with the battery are in a lockable container for extra safety.

The spray bar folds down in a matter of seconds by removing the D clips holding it in place.

Other Cross Machinery

Cross Agricultural Engineering also do a huge range of other farm machinery. With over 50 products in the Cross catalogue there are machines to suit all types of farming. These machines include Chaser Bins, Ring Rollers, Slurry Tankers, Slurry Agitators, Post Drivers, Furrow Presses and much more.

“It’s the Obvious Choice”

Cross Agricultural Engineering is the result of generations of metal working skills within the Cross family. This heritage has provided a solid foundation for the design and manufacture of quality farm machinery, with the constant help and co-operation with farmers and contractors.

All Cross machines are manufactured in a purpose-built facility, which utilises the latest in manufacturing technology.

The company provides all its own research and development work in-house.

Following this, new machines are tested rigorously to assess their reliability and
